PROFILE SUMMARY

Final year Computer Science and Engineering student with strong foundations in AI integration, and software engineering. Proficient in Java, Python, JavaScript, MySQL, APIs, and workflow automation using n8n. Experienced in developing scalable web applications, AI-powered solutions, and distributed systems through academic and personal projects. A quick learner with excellent problem-solving and collaboration skills, seeking an entry-level Software Developer or AI Developer role to contribute to innovative technology solutions.

EDUCATION

B.E. Computer Science and Engineering 2023 – 2027 (Expected)
SCAD College of Engineering and Technology, Tirunelveli, Tamil Nadu
GPA: 7.3 / 10.0 (Penultimate year of study)

TECHNICAL SKILLS

Languages: C, Java, Python, Javascript

Distributed & Systems: APIs, concurrent workflow automation (n8n), MySQL

Web & Frameworks: HTML/CSS

AI / ML: API, LLM integration, agentic AI systems, prompt engineering

Tools & Platforms: Git, GitHub, VS Code, n8n automation, MS Office(Word, Excel, Powerpoint)

CS Fundamentals: Data structures algorithms, OOP, software design principles, debugging, problem solving

EXPERIENCE

Web Development Intern 2024

Zaalima Development, Bangalore (Remote)

- Built and maintained full-stack web features using React.js and Node.js, improving page load performance by optimising component rendering and API call patterns.
- Implemented concurrent asynchronous data-fetching flows, reducing latency in multi-source aggregation pipelines.
- Collaborated on system design decisions for scalable REST API endpoints, applying software design best practices.
- Debugged and resolved production issues by analysing server logs and using browser DevTools profiling.

PROJECTS

Multi-Agent Customer Service System | *n8n · Google AI Studio API · Distributed Architecture*

- Architected a production-grade multi-agent system with specialised agents handling intent classification, retrieval, and response generation running in parallel across independent processes.
- Implemented inter-agent communication via message-passing queues, enabling concurrent task execution and graceful failure recovery.
- Designed the system for horizontal scalability: each agent is independently deployable and stateless, following microservice principles.
- Achieved sub-300ms end-to-end latency under simulated concurrency load through asynchronous I/O and connection pooling.

FreelanceOS — AI-Powered Freelancer Management App | *React.js · Node.js · Google AI Studio API · SQL*

- Built and shipped a full-stack application at the BuildWithMeDo Hackathon that automates client onboarding, invoicing, and project tracking for freelancers.
- Integrated an LLM-backed assistant to parse natural-language client briefs and generate structured project plans, demonstrating applied AI in production-like conditions.
- Designed a modular backend architecture separating concerns across services (auth, billing, AI inference), enabling independent testing and scaling.

CERTIFICATIONS

DevOps — Infosys Springboard (Naan Mudhalvan) | Jul 2026

Front End Technologies — IBM SkillsBuild (Naan Mudhalvan) | Nov 2025

EBPL (Career Shaper) — HCL Career Shaper (Naan Mudhalvan) | Oct 2025

Agentic AI & Automation Programme — GenLab | Mar 2026
